

304L

Stainless steel

304L stainless steel is the most common stainless steel, as 316L stainless steel it is non-magnetic, austenitic, corrosion resistant alloy. With its low carbon content, 304L steel minimizes the risk of precipitation of chromium carbide and therefore offers better protection against corrosion.

Applications: Chemical, Food, Maritime, Petroleum, Furniture, Decoration industries.

Density: 7.8 g/cm³

Max T° of use: 800°C
