

M2

Tool steel

M2 steel is the “standard” and most widely used industrial High-speed steel, commonly used as cutting tool material. It is often used in power-saw blades and drill bits. After heat treatment, its hardness is the same as T1, but its toughness and thermo-plasticity are higher than T1 by 50%.

Applications: Tools drill bits, taps and reamers.

Density: 7.9 g/cm³

Max T° of use: 900°C
