

PET

Polyethylene terephthalate

PET is a copolyester. PET is the most common thermoplastic polymer resin of the polyester family and is used in fibres for clothing, containers for liquids and foods, thermoforming for manufacturing, and in combination with glass fibre for engineering resins. Widely used as commodity thermoplastic it makes a good gas and fair moisture barrier.

Applications: Household, Packaging, Food container, Electronics.

Melt T° range: 220 - 290°C

Max T° of use: 90°C
