Created in 2018, the Global Industrie Awards recognize exhibitors at the Global Industrie show for the development of an innovative product, service or know-how. For the 2022 edition of the show, which will be held in Paris Nord-Villepinte, May 17-20, six companies have been awarded:

- Production Technology category: Pollen AM for its New Pam Series MC additive manufacturing system.

According to Pollen AM, the New Pam Series MC is the most flexible additive manufacturing system thanks to its openness to material in granular format. It allows applications in thermoplastic materials but also in metal and ceramic thanks to the injection grades used by the metal and ceramic injection processes.
