

ASA

Acrylonitrile Styrene Acrylate

ASA is an amorphous styrenic copolymer, it is structurally very similar to ABS. It presents high surface quality, good impact strength, chemical, UV and heat resistance. For these reasons, ASA is used as the material of choice for exterior applications. This material can be easier to 3D print than ABS.

Applications : Automotive, Electronics, Household, Constructio
Toys, Sprots and Leisure.

Melt T° range: 240 - 280°C

Max T° of use: 95°C
