

PP

Polypropylene

PP is a polyolefin semi-crystalline polymer and its properties are closely linked to its morphology and molecular structure. Lightweight, stiff at high temperature and chemically stable it is a commodity thermoplastic which is most often preferred to PEBD. Glass fiber or other fillings can be used to increase stiffness.

Applications: Household, Packaging, Automotive, Medical devices.

Melt T° range: 220 - 250°C

Max T° of use: 70°C
